# Gas Strategies Interview: Ben Caldecott, stranded assets programme director, University of Oxford

The energy landscape has never been more uncertain. Producers of all stripes are looking to secure their position in the future energy mix and convince investors that they are indispensable to both meeting energy demand and tackling climate change. Gas Strategies spoke to Ben Caldecott, director of the stranded assets programme at the University of Oxford's Smith School of Enterprise, to discuss the challenges facing the oil and gas industry in a carbon-constrained world, and whether the environmental lobby should face facts on the role of natural gas as a transition fuel.
