Pricewatch – Commodities exposed to Trump-FBI US dollar wobble

The US dollar has fallen to a six-month low against a basket of major international currencies including the euro and British pound as reports of US president Trump's alleged dealings with the FBI have prompted speculation over possible future impeachment proceedings.

A weaker dollar limits the purchasing power of US consumers, but can give exporters a competitive edge in foreign markets. It can also prove a boon for those in other parts of the world that buy commodities priced in USD such as Brent crude.
